Bandung, West Java | +62 851-5669-2133 | [GitHub](#) | [LinkedIn](#) | [Email](#) | [Digital Credentials](#)

Software Engineer with 3 years of experience building web-based products across education, enterprise, asset management, and e-commerce domains. Backend-focused with full-stack development experience, a strong track record of enhancing existing systems, and the ability to adapt to different technical environments, codebases, and delivery requirements

Technical Skills

- **Languages:** Python, Go, Node Js, Java, PHP
 - **Frameworks:** FastAPI, React Js, Vue Js, Express Js, Nest Js, Spring Boot, Laravel, Gin, Next Js
 - **Databases:** PostgreSQL, MySQL
 - **Infrastructure & Tools:** Docker, Nginx, PM2, GCP, Git, Prometheus, Grafana, Node Exporter, Github Action
 - **Architecture & Integration:** REST API, gRPC, Microservices, Payment Gateway Integration
-

Work Experiences

Software Developer | PT. Saka Sakti Inovasi (Remote)

Oct 2024 – Oct 2026

- Promoted from Junior Developer to Software Developer after six months based on consistent delivery and increased ownership of backend development
- Enhanced an existing multi-tenant school management SaaS serving multiple educational institutions, supporting 1,400+ accounts across student, teacher, administrative, and operational roles
- Maintained backend services for admissions, student health, counseling, e-library, finance, attendance, canteen, laundry, and school payments; implemented school-specific API/database filtering for different institutional workflows
- Built and enhanced payment gateway workflows, including payment-status troubleshooting and controlled database rollback procedures, and implemented WebSocket-based real-time push notifications
- Developed backend features for an asset management platform prepared for approximately 90+ RRI branches, covering transmitters, operational equipment, field coordinates, health checks, photo documentation, monitoring, and PDF/Excel reporting, improved search through database indexing
- Contributed to a 3-month APBA outsourcing project by developing Go backend services, fixing UAT issues, adding new features, integrating REST APIs with external SAP systems, and implementing gRPC communication between services

Software Developer (Freelance) | PT. Kunci Transformasi Digital (Remote)

May 2024 – Mar 2025

- Developed backend authentication for an organization management system using MAC Address validation and role-based access control to support a one-user, one-device requirement
- Managed staging deployment on a VPS using Docker, Nginx, PM2, SSL, reverse proxy configuration, domain setup, and environment variables
- Developed backend modules for a competition management system using Express Js and MySQL, including authentication and timed examination workflows; project completion was continued by another team

Full Stack Developer (Freelance) | PT. Anaheim Nimbus Universal (Remote)

Nov 2023 – Dec 2023

- Developed a production-ready e-commerce web application within a one-month timeline using Laravel and Tailwind CSS for campus merchandise sales.
 - Implemented real-time stock synchronization to maintain consistency between customer orders and warehouse inventory.
 - Collaborated with a 6-person cross-functional team consisting of system analysts, UI/UX designers, and developers to deliver the required university project scope.
-

Volunteer Experiences

Head Curriculum Developer | Google Developer Student Club (GDSC) Universitas Pasundan

Sep 2023 - Jun 2024

- Coordinated curriculum planning across 7 technical sub-departments and organized 30+ technical events with an average of 30+ participants per event
 - Facilitated topic discovery, speaker coordination, and cross-department discussions to deliver technical sharing sessions aligned with student interests
-

Education

Bachelor of Informatics Engineering | Universitas Pasundan, Bandung, Indonesia

Oct 2020 - Aug 2024 | Final GPA: 3.77 out of 4.00

- Developed backend modules for an iPosyandu platform using NestJS, MySQL, and Rabbit MQ, migrating selected modules from a monolithic system toward a microservices architecture
- Implemented RabbitMQ-based messaging to exchange information between services and support future service decoupling

Cloud Computing Specialization | Bangkit Academy 2023 Batch 1 by Google, GoTo, and Traveloka (Remote)

Feb - Jul 2023

- Delivered the backend workflow and system architecture for EatNow, a food recommendation application developed by a 6-person team across web, mobile, and machine learning workstreams.
- Supported deployment planning and standardized frontend-backend integration through centralized API documentation.
