Bandung, West Java | +62 851-5669-2133 | [GitHub](#) | [LinkedIn](#) | [Email](#) | [Digital Credentials](#)

Software Engineer with 2+ years of experience specializing in Fullstack Development, with a core focus on **FastAPI (Python) and React (TypeScript)**. Proven track record in scaling multi-tenant SaaS for educational institutions and engineering complex multi-level approval systems involving intricate labor-hour logic. Dedicated to building scalable, high-integrity software solutions that align with business growth.

Skills

Technical Skills

- Core Stack: Fastapi, React
- Database: PostgreSQL, MySQL
- Tools/Infrastructure: Git, Docker, GCP
- Other: Express JS, Java Spring Boot, Nest JS, Laravel, Go Gin

Soft Skills

- Problem Solving
 - Teamwork
 - Leadership
-

Work Experiences

Software Developer | PT. Saka Sakti Inovasi (Remote)

Oct 2024 – Oct 2026

- Successfully scaled a multi-tenant SaaS for Digital School Management from a single institution to 3 active schools, managing end-to-end modules including automated payment gateways and student admissions.
- Engineered a complex multi-level approval system with integrated labor-hours calculation, accounting for working days, holidays, and automated rollback/escalation workflows to ensure high data integrity for executive validation.
- Architected and deployed an asset management system for a major national media institution, ensuring accurate tracking and reporting of high-value equipment through optimized database indexing and streamlined UI-to-Backend integration.
- Optimized system reliability for ongoing internal products by implementing proactive monitoring and systematic code refactoring, resulting in high service availability for educational stakeholders.

Software Developer (Freelance) | PT. Kunci Transformasi Digital (Remote)

May 2024 – Mar 2025

- Engineered a secure organization management system by developing a JavaScript (Express JS) backend with MAC Address-based authentication, supporting secure identity management for a large-scale organization.
- Streamlined deployment workflows by managing VPS infrastructure using Docker and Nginx, resulting in a functional CI/CD pipeline up to the staging environment.
- Developed 80% of a comprehensive competition management system, including modules for timed examinations (tryouts) and automated scoring, by architecting the backend using Express.js and MySQL.

Full Stack Developer (Freelance) | PT. Anaheim Nimbus Universal (Remote)

Nov 2023 – Dec 2023

- Developed a production-ready E-commerce web application within a strict 1-month timeline by utilizing Laravel and Tailwind CSS to build an end-to-end inventory and stock management system.
 - Improved inventory accuracy by implementing real-time stock synchronization logic, ensuring consistent data integrity between orders and warehouse availability.
 - Collaborated effectively in a 6-person cross-functional team (SA, UI/UX, and Developers) to ensure the project met all functional university requirements.
-

Volunteer Experiences

Head Curriculum Developer | Google Developer Student Club (GDSC) Universitas Pasundan

Sep 2023 - Jun 2024

- Ensured operational readiness for 3-4 technical sharing sessions per month by conducting strategic alignment meetings with 7 technical leads and facilitating necessary learning resources.
 - Orchestrated technical roadmaps and resource allocation for 7 specialized divisions, streamlining cross-functional workflows between 25+ developers and operational teams..
 - Optimized cross-functional collaboration between technical divisions and operational teams (HR and Events) by standardizing the event preparation workflow and synchronizing resource allocation for all major programs.
-

Education

Bachelor of Informatics Engineering | Universitas Pasundan, Bandung, Indonesia

Oct 2020 - Aug 2024 | Final GPA: 3.77 out of 4.00

- Accomplished a scalable "iPosyandu" system with a 3.77/4.00 final GPA by architecting a Microservices system using NestJS and implementing RabbitMQ for asynchronous Pub/Sub messaging.
- Streamlined system maintainability by decoupling monolithic modules into independent services through domain-driven design.

Cloud Computing Specialization | Bangkit Academy 2023 Batch 1 by Google, GoTo, and Traveloka (Remote)

Feb - Jul 2023

- Successfully delivered "EatNow," a cross-platform mobile and web application as a final capstone project within a 4-person team by defining the system architecture and managing the backend workflow.
- Optimized team development speed by standardizing the architectural workflow through the implementation of centralized API documentation and clear backend-to-frontend integration protocols.
